Inspect Cell

A microscopic image of a blood smear. The field is populated with numerous red blood cells, which appear as uniform, pinkish-purple discs. In the center of the image, a single cell is highlighted with a green bounding box. This cell is distinct from the others, featuring a large, dark blue, irregularly shaped nucleus and a lighter, more granular cytoplasm. The green bounding box is composed of four L-shaped corner markers that define the cell's perimeter.
